

To Whom it May Concern

Our Ref: MG/MC/KLC/18022010a.doc

18th February 2010

Dear Sir or Madam

Lingard Ltd

Lingard Ltd were recently commissioned to undertake floor repairs around 24 Nos. Babcock 10E Pulverising Mills. They were invited to carry out a survey and inspection of the concrete floors which had been damaged due to heavy impact and vibration from the adjacent large pulverising mills and provided us with a cost effective practical solution.

The solution proved relatively straight forward, using pre-bagged high performance materials supplied by Sika's local stockist E.P.M.S. Supplies Ltd.

The job required a significant amount of careful preparation in an environment which was noisy and at times very dusty. It also required the workforce to work in compliance with Scottish and Southern Energy's Safety Rules, Work Control and Planning systems.

The contract was undertaken in a thoroughly professional manner from the first to last mill, leaving us with floors which meet the demands of this aggressive environment.

We would therefore have no hesitation in recommending Lingard Ltd to any potential customers.

Yours faithfully

Michael Gee
Station Manager
